Abstract of JP5003683

PURPOSE: To enhance driving efficiency of capacitive load by improving a capacitive load driving circuit.

CONSTITUTION: In a power supply comprising a DC power supply and switching means 10, 30, 60, 65 and applying an AC field on a capacitive load 70, an inductance 40 and the switching means 10, 30, 60, 65 are disposed between the load 70 and the power supply 20 in order to transfer energy between them. Means for holding the magnetic energy of the inductance 40 is also provided.
